

## **I-11 USE OF THE INTERNET**

The Board encourages students to utilize the computing capability of the school system in pursuit of their education objectives. The Board strives to keep up-to-date equipment, software and communication capabilities at all schools in the system. Students and their parents/guardian must sign an agreement to abide by the rules and regulations for using the computing resources, software and communication infrastructure of the school system as outlined in the Statement of Responsibilities for School Personnel, Parents and Students. Violation of this policy could result in the suspension of the privilege of using the school system's computing resources as well as appropriate disciplinary action as outlined in the Statement of Responsibilities. This does not relieve or waive the responsibility of the student to complete any work assigned by his/her teachers.
